Junior Software Developer

Description

We are actively looking for talented Junior Software Engineers jump starting their software development careers at **Bit & Byte Lab**. We expect this individual to have a desire to learn, participate in engineering discussions, and contribute to the various components of the [Sublime Care cloud](#), APIs and software. We seek a candidate with a strong desire to contribute to our development team's fast paced development cycle.

Responsibilities

- Learn and gain experience on a variety of Windows based C# technologies
- Assist in debugging and analyzing our user APIs and interfaces (GUI, MySQL, REST API)
- Learn about financial markets
- Work with DevOps, IT and client support teams to troubleshoot issues
- Learn our Agile methodology
- Provide **Bit & Byte** development teams and business units with software solutions and ideas
- Contribute to our client support team's software quality assurance
- Assist integration efforts for **Bit & Byte Lab**'s growing client base

Qualifications

- Bachelor's degree in Computer Science, Computer Engineering, or related field
- Minimum 1 years' experience in software development
- Knowledge of the financial markets (CBOE, NYSE, CME), a plus
- Demonstrable C#, .NET, WPF, Javascript, Java, R, Python, REST skills
- Debugging and problem solving
- Excellent programming skills
- Strong work ethic
- Communication with end users, assessing requirements and managing expectations professionally
- Ability to work in a fast-paced, high pressured technology environment
- Independent project and time management
- Professional, motivated attitude
- Strong interpersonal skills
